EvoSort M9

Desktop Coin Sorter

With outstanding detection, a processing speed of up to 1,000 coins per minute and with functions that will surprise you in this category, EvoSort M9™ is the most advanced coin sorter in its class and the ideal choice for bank branches, retail and vending companies.

FUNCTION DEFINES DESIGN

EvoSort M9™ keeps everything our customers like on the CMX30, but with some technical improvement and a face lift. After long research we came back to the same basic setup which has proven to work since almost 3 decades.

The hopper area allows filling up to 5,500 coins (around 3.500 coins classic Euro-Mix). No manual pushing and no heavy lifting is required.

Coin rail and hopper an fully accessible in a second even if the top hopper is full of coins.

The overfilling protection prevents automatically putting to many coins and keeps the machine at maximum processing speed.

The screen is visible from seated and standing position.

The large coin boxes allow you to count until typical batch stops without changes the boxes.

You have a permanent view on the reject box so see if there are any coins. If so, no need to pick them by hand - just pull out the box and empty in the hopper for recounting.

CONVENIENT TO USE

Hopper, buttons, touch-interface, screen printer and coin path are all well positioned and user friendly. No need for bending or standing. The large but still very low hopper allows perfect visibility and facilitates the machines' feeding. Screen, buttons and functions can be adapted to your companies' work-flow requirements.

2 5 physical and customizable quick access buttons

3 TFT color touchscreen with multi-language user interface

4 Removable reject pocket

5 LED buttons at each exit pocket

● Functions and screen customizable by site administrator

● Protocol of deposits including denomination details.

● Integrated cash management software

DURABLE AND EFFICIENT

High Speed coin processing, flexibility and reliability makes your coin processing more efficient.

● Up to 1,000 coins per minute with full detection

● Dual currency operation

1 Automatic feeding via wide and easy accessible hopper

● 8/1/1 pocket system

● Durable materials

● Dust removing system

● Ideal for token processing

COMPLIANCE

With reliable forged coin detection, EvoSort™ also provides excellent foreign coin rejection levels proven through vigorous testing.

● cashDNA™ Dual Sensor System

● Only low voltage used within the unit

● Compliant to OSH regulations

● Compliant to EU1210/2010
